We see how early childhood experiences are so important to lifelong outcomes, how the early environment literally becomes embedded in the brain and changes its architecture. — Dr. Andrew S. Garner, MD, PhD, University Hospitals of Cleveland (2013)
Early Intervention Services in Nevada

In 2007, the National Early Intervention Longitudinal Study (NEILS) found increased motor, social, and cognitive abilities for young children who received Early Intervention services compared to those who did not.

WHAT IS EARLY INTERVENTION?

Early intervention is a system of coordinated services and supports for eligible children from birth to three years of age with developmental delays or disabilities and their families. Early intervention promotes the child’s growth and development and supports families in meeting the developmental needs of their child. Early Intervention Services are mandated through Public Law 108-446, Part C of the Individuals with Disabilities Education Improvement Act of 2004 (IDEA).

Nevada’s Early Intervention Services (NEIS) system encourages family participation, ensures parents are fully informed and provide consent for all evaluations and services. From the determination of eligibility until children transition at age three, Nevada programs strive to support families through family-centered and family-friendly practices.

WHAT ARE THE BENEFITS OF EARLY INTERVENTION?

Over the years, researchers have discovered a variety of ways children learn and develop, as well as the importance of early intervention. Scientific studies have documented what occurs in the brain during a child’s first years of life, and can now predict what can give a child the best chance of success, thereby improving quality of life, including:

- A child’s brain develops faster during the critical years from birth to three than at any other time and early intervention has a definite impact.
- Through early intervention, the long-term health of infants and toddlers with disabilities is improved, reducing the health costs of preventable secondary impairments and disabilities.
- Early intervention is known to decrease educational costs by minimizing the need for long-term special education and related services.
- Early intervention is cost-effective because it enables families to provide care for their children within their home, reducing the need for costly institutional care while maximizing the child’s potential for independence.
- Research shows that children with developmental delays are healthier and learn better when they receive services as early in their lives as possible.

“Intervention is likely to be more effective and less costly when it is provided earlier in life rather than later.” — Center on the Developing Child at Harvard University (2010), The foundations of lifelong health are built in early childhood.

“Well-designed early childhood interventions have been found to generate a return to society ranging from $1.80 to $17.07 for each dollar spent on the program.” — Rand Corporation Research Brief, 2005

EARLY INTERVENTION SERVICES MAY INCLUDE THE FOLLOWING:

- Assistive technology devices and services
- Audiology services
- Family training, counseling and home visits
- Health & Nutrition services
- Multi-disciplinary evaluations and assessments
- Occupational therapy
- Physical therapy
- Psychological services
- Service coordination
- Specialized Instruction
- Speech and language services
- Social work services
- Vision and mobility services
- Other Services, eg. Transportation, Respite Care, etc.

By law all early intervention services must be provided in natural settings for children including the family home, child day care settings and other places in the community where typically developing children spend time.

Read the Parent Handbook for more information at: http://dhhs.nv.gov/Programs/IDEA/Early_Intervention_Programs/
State Interagency Coordinating Council (ICC)

In accordance with the Individuals with Disabilities Education Act (IDEA), Public Law 99-457, Nevada’s Governor established the Nevada Early Intervention Interagency Coordinating Council (ICC) in 1987. All members of the ICC are appointed by the Governor. The Council’s primary mission is to advise and assist the Nevada Department of Health and Human Services in the development and implementation of a statewide system of early intervention services for young children with developmental delays or disabilities and their families.

WHAT IS THE PURPOSE OF NEVADA’S ICC?

The ICC provides support to the State in the development and implementation of Nevada’s State Systemic Improvement Plan (SSIP).

Nevada’s SSIP is a five (5) year plan designed to ensure the system of early intervention services under Part C of the IDEA results in improved outcomes for infants and toddlers with disabilities and their families. The primary focus of the SSIP plan is improved social and emotional outcomes.

“Services [early intervention] to young children who have or are at risk for developmental delays have been shown to positively impact outcomes across developmental domains, including health, language and communication, cognitive development and social/emotional development. ... Families benefit by being able to better meet their children’s special needs from an early age and throughout their lives.” — The National Early Childhood Technical Assistance Center, April 2011 Fact Sheet

Research has shown that at 9 months of age, only 9% of children who have delays that would make them eligible receive services; at 24 months of age only 12% of children who would be eligible receive services. — Journal of Developmental and Behavioral Pediatrics, (2011) 32(4), 1-8.

Nevada ICC Members

| Vacant | Legislature |
| Nevada Legislature Representative |
| Sherry Waugh, (ICC Co-Chair) | Head Start Agency Representative, Early Head Start, UNR |
| Aimee Hadleigh, (ICC Co-Chair) | Parent Representative — Northern Nevada |

| Kate Osti, Advocacy Representative — Nevada Disability Advocacy & Law Center |
| Kari Horn, Advocacy Representative — Governor’s Council on Developmental Disabilities |
| Karen Shaw, Native American Representative — Washoe County School District |
| Jenna Weglarz-Ward, Ph.D., Personnel Preparation — Rep., College of Education, Special Education, UNLV |

Ashley Greenwald, Ph.D., Rep. UNR Nevada Center for Excellence in Developmental Disabilities, Nevada Early Intervention-Nellis Child Development

Sarah Horsman-Ploeger, Private Provider Representative — Nevada Early Intervention-The Continuum

Sandra LaPalm, Public Provider Representative — Nevada Early Intervention Services-Northeast Region

Claribel Zecena, Public Provider Representative — Nevada Early Intervention Services-Northwest Region

Dawn Brooks, Public Provider Representative — Nevada Early Intervention Services-Southern Region

Vacant, Provision of, or Payment for, Early Intervention Services— Rep., Aging & Disability Services Division

DuANE Young, State Medicaid Representative — Division of Health Care Financing and Policy

Vacant, State Foster Care Representative — Division of Child and Family Services

Christell Askew, Child Care Agency Representative — Division of Welfare and Supportive Services

Vacant, Health Insurance Agency Representative, State Division of Insurance

Rhonda Lawrence, Early Childhood Mental Health Rep., Division of Child and Family Services

Daina Loeffler, 619 Coordinator/Preschool Services — Representative, Nevada Department of Education

Vacant, Office of the Education of Homeless Children — Representative, Nevada Department of Education

HOW DOES THE ICC ACCOMPLISH ITS DESIGNATED GOALS?

The ICC must meet at least quarterly and is supported by the IDEA Part C Office. Additionally, ICC members participate in various other activities to accomplish its tasks. Public input is welcome and families are always encouraged to participate. For more information, contact Project ASSIST at 1-800-522-0066 / Email: ProjectAssist@dhhs.nv.gov or visit the web at http://dhhs.nv.gov/Programs/IDEA/ICC/Home
Why parents need to be involved...

When you are involved, you gain experience in communication and leadership and it helps you to get useful information and answers to questions you may have. By actively participating and interacting with others, you can choose to make a difference in the lives of many young children with special needs and their families. One voice can make a difference!

Below is just one of many opportunities in Nevada to...

- Provide valuable input from a parent's perspective,
- Assist in the development of program policies and
- Help shape and create a better system for all children receiving Early Intervention Services!

Nevada's Early Intervention Interagency Coordinating Council (ICC) established a "Family Support Resource Subcommittee". This committee supports ICC activities and helps ensure the ICC responds to issues important to families, strengthens and broadens family involvement at all policy and service levels, increases ICC communication with families, provides public awareness support, and identifies and supports efforts to improve early intervention services and programs within communities. There are also other opportunities for participation on various subcommittees, ad hoc committees, task forces and work groups.

Information may be requested by contacting Project ASSIST at:

ProjectASSIST@dhhs.nv.gov

"As a mother, it would be quite the understatement to say my plate is full. In addition to the things that come along with raising typically developing children, I had the opportunity to raise two exceptional boys. My oldest son, Ethan, is seven years old and was born with a hearing difference. Along our journey, we learned that he also has Asperger's Syndrome. Despite his unique needs, he is a joy to raise and I am constantly in awe of his intelligence. My youngest little guy is four year old Jacob and even though he has an overall developmental delay, he is making huge strides and has the sweetest heart.

In my nearly eight years of being a mother, I have learned so very much about the world of special needs parenting. Both of my boys received and greatly benefited from Early Intervention services. Throughout their time in the program, our family learned a lot in regards to promoting their development and utilizing strategies to assist with their unique needs. However, it was not until I took the next step of taking my seat at the table and getting involved as a parent, that I realized all of the opportunities available to families and caregivers.

Right before Jacob exited the Early Intervention program, I learned of the opening to join our state's Interagency Coordinating Council (ICC) as a Parent Representative. Joining this board afforded me the opportunity to advise and assist in the development of and implementation of a statewide system of early intervention services for young children with developmental delays or disabilities and their families. I was able to bring my firsthand parent perspective to the table and represent families with children in Early Intervention in Southern Nevada.

Throughout my time on the ICC, I have learned that it is essential to give parents a voice in order to improve services and make them even more specific for our children. Not only do we, as parents, know our children best, we are their number one advocate from the time of birth. State boards like the Interagency Coordinating Council (ICC) are the perfect place for parents to share their experiences, gain knowledge and help their family, as well as many others throughout their community. I highly recommend you speak with you service coordinator about ways to get involved and take your family's journey to the next level". ~ Candace Emmerson, ICC Parent Representative

"(1) Parents/caregivers are the major influence on their children's development even when their children participate in intervention; and that (2) the effectiveness of intervention is highly associated with parents becoming more responsive with their children during the course of intervention." — [Mahoney (2009), pp. 90]
Project ASSIST is Nevada’s Central Directory for families of young children with disabilities or special healthcare needs, as well as agencies, organizations and programs that serve them.

In SFY 2020, 765 calls for information or resources were received by Project ASSIST, 47 from out of state and 311 referrals to Early Intervention were made.

Information may be found on a variety of resources, including:
- parent support groups,
- early intervention programs for infants and toddlers,
- preschool special education services,
- education, health and social services,
- therapy,
- advocacy organizations,
- financial and legal assistance,
- and many other services.

There is no cost for this service.

There is a growing body of evidence that early intervention services have a positive influence on the developmental outcome of children with established disabilities as well as those who are considered to be “at risk” of disabilities. — American Academy of Pediatrics (2007)

Building the Next Generation of Leaders...  

Nevada Partners In Policymaking, a very intense and innovative national model of leadership training designed to teach parents and self-advocates the power of advocacy and to change the way people with disabilities are supported, viewed, taught, live and work. It is done in eight (8) sessions, one per month for eight months.

Participants gain:

- Valuable working knowledge on disability issues and information on resources available in the community.
- Advocacy skills.
- New relationships with people who have the same interests as you.

Nevada Partners In Policymaking is all about...

- Leadership skills and developing positive partnerships with elected officials and other individuals who make policy decisions about services that you and/or your family use.
- Systems change—creating, working towards, and achieving a vision of shared values about people with disabilities.
- Becoming confident in oneself, competent in the knowledge and information received, and comfortable in sharing the life experiences and expertise one brings to the table.

My name is Isaac. I am the youngest! I was diagnosed with Club Feet when my mom had her 20 week ultrasound. My parents were told they wouldn’t know how bad it was until I was born.

I arrived in September 2019. At two weeks I had my first appointment with Shriners in Salt Lake City and ended up leaving the hospital with casts on both legs. We started Early Intervention shortly after with Physical (PT) and Occupational Therapy (OT). After two months I was “promoted” to braces and we were told that I did not need any surgery, what a wonderful day!

I started crawling at eight and a half months, learning how to stand up and walk along furniture just like any other baby. I am currently wearing the braces at bedtime and will be for a long time to come. I recently graduated from OT because I was making great progress, though I am still doing PT monthly.

My progress has been amazing, but I still have a long road ahead of me and I will continue to do what helps me get to where I need to be. To all those who helped me on my journey, I cannot thank you enough for the love and support you have given me in these difficult but wonderful times." ~ Isaac/Mom, NEIS-Northeast Region

Soon you will be receiving or already have received, the annual family survey. Please take the time to fill it out and turn it in. We want the best information possible about the ways in which early intervention services may or may not have helped your family. The results of this survey will help guide efforts to improve services and outcomes for children and families across Nevada receiving early intervention services.

If you have questions call us at Project Assist 1-800-522-0066 or email ProjectAssist@dhhs.nv.gov

Published in 2019, Researchers from the Centers for Disease Control and Prevention (CDC) and the Health Resources and Services Administration (HRSA) on the Prevalence of Developmental Disabilities in US Children — Key findings of the study were that approximately one in six American children 3 to 17, are diagnosed with one or more developmental disabilities, an increase of 17% from 2009-2017.
Public Awareness is designed to notify the public of the availability of early intervention services in the State system.

Nevada Child Find Project is a statewide system that serves two primary functions. First, it is designed to identify unserved children who are eligible for early intervention services. The project’s other focus is to provide information to the general public, physicians, childcare providers, hospitals and health care providers about early childhood development, and how to make referrals for early intervention services.

"Age of intake had a significant impact on the results of the behavioral program. The younger the child was at intake of the program, the greater the impact the early intervention behavioral program had on their abilities." — Makrygianni, M. K., & Reed, P. (2010), Research In Autism Spectrum Disorders.

If you know of a child who may be eligible for services, call Project ASSIST 1-800-522-0066 or email ProjectAssist@dhhs.nv.gov

Nevada Care Connection provides families up-to-date resources and information that will support and assist caregivers as they care for family members that have disabilities.

The Genetic Alliance has created an Advocacy ATLAS in partnership with Parent to Parent USA and Family Voices with support from the Health Resources and Services Administration. It has a page with all kinds of resources on Advocacy & Leadership skills. Please take the time and look over what is available. You may find some information useful in a current situation.
Aaron was my first kiddo when joining this amazing company, and I wanted to shine on him for how far he has come, in just three months of tele-health services. Aaron came into our program right after his first birthday, and the family was so concerned about his development. Aaron was not showing many signs of walking at this time, and was a very picky eater. Aaron was unable to pick up finger foods and was reluctant to try most of them.

We have an Occupational Therapist working with him on his fine motor, and he has been progressing beautifully! On our last home visit Aaron was not only walking, he was running! Aaron is able to pick up finger foods, place shapes in a shape sorter and he even says “dada” and “duck”. Aaron is eating more textured foods and more willing to try them. The family is so excited about the progress that Aaron has made in such a short time, and under unusual circumstances. Tele-Therapy through Zoom has been the tool we have used to see our families. Aaron was very shy the first time I saw him, and continuously got less “camera shy”. We now have interactive visits, and Aaron is all smiles and shows me his toys and we play through video.

Mom mentioned something to me on our last visit, and I couldn’t have said it better myself, “I am a new mom, Aaron didn’t come with a manual! I am his first teacher, so I educate myself and listen to my therapist’s and what they tell me and I try everything! I am open-minded. If I am given an idea on how to help Aaron, I do it”.

This was a great way of explaining the family of Early Intervention. We are a family based program and we work as a team! I am very excited about this team, and the children and families we will continue to serve in the days, weeks, months, and years ahead. — Developmental Specialist, MDDA

26.6% of children in Nevada age 4 months to 5 years are determined to be at moderate or high risk for developmental or behavioral problems. — National Survey of Children’s Health, 2011-2012
Nevada’s Children and Youth with Special Health Care Needs (CYSHCN) serves “...children who have or are at risk for chronic physical, developmental, behavioral or emotional conditions and who also require health and related services of a type or amount beyond that required by children generally”, by working with families and across systems to develop strategies that promote quality well-being and support for those children and their families.

In Nevada, the CYSHCN Program provides resources and support to community agencies serving children from birth to age 21. The CYSHCN Program funds a variety of community programs bridging service gaps by linking families to appropriate systems-level and enabling resources and providers.

It was so nice to meet other families who “just got it”. No explaining what was "the matter" with our children or anyone saying, "I just don't know how you do it". — Cerebral Palsy Parent Network - Reno, NV

Cerebral Palsy Awareness Month
Developmental Disabilities Awareness Month
Multiple Sclerosis Awareness Month
National Nutrition Month
My name is Charleigh, and according to doctors I shouldn’t have survived through my mom’s pregnancy. If I did survive, my parents were told that I would have a very low birth weight, be in the NICU, and have many health problems that I would have to face. My mom was hospitalized three times due to preterm labor starting at 30 weeks gestation. My mom was sent home from the hospital at 30 weeks being told that I would come any day. I was able to hold on and doctors had to induce my mom at 39 weeks! I ended up being born at 8lbs 12oz, and I was as healthy as could be. I overcame all odds during the high-risk pregnancy!

My parents were noticing that I wasn’t responding to their faces as much as their voices. Due to my mom’s vision problems I was taken to see an eye specialist, which is when I was diagnosed with Amblyopia. This means that my brain favors one of my eyes and develops pathways to only one eye. Because of this my brain only sees with my stronger eye, and then the vision in my weaker eye doesn’t develop. I got glasses at 4 months old, and these have really helped me learn to see and hopefully will help bring back some of my vision in my weaker eye.

My diagnosis of Amblyopia also started affecting other areas of my development as I had a hard time learning where in space I was. Eating was hard for my parents as I couldn’t always see the bottle or spoon coming to my mouth. My gross motor skills are behind as well. I always preferred to be looking in one direction as it was where I could get the best vision, but due to this I was diagnosed with Plagiocephaly. Unfortunately, this repeated pressure on my head in one area caused my head to become flat and that is why I wear a helmet.

Being in Early Intervention at Advanced Pediatric Therapies has helped me and my family so much. I can’t say enough good things about the therapists and staff at APT. I receive Occupational Therapy as well as Physical Therapy, and my therapists have helped my family learn different ways to help me overcome the obstacles that I face. My team at APT not only gives my parents advice and supports them, but they also love and believe in me. They have helped my family through the struggles that come along with glasses, a helmet, and having both of these at the same time. My therapists have given my parents the knowledge and skills necessary to help me meet my milestones! I recently started rolling, and now I am working very hard on trying to sit. I know that it can be overwhelming at times for my parents, and I am so happy that they have the support from my team of professionals at APT. They are not only my therapists and my team, but they are my family!” ~ Charleigh/Mom

"The opportunity to diagnose and thus begin treatment for autism around a child’s first birthday has enormous potential to change outcomes for children affected with the disorder.” — Karen Pierce, PhD, Assistant Professor, UC San Diego Department of Neurosciences (2011)
The Autism Coalition of Nevada (ACON) is comprised of representatives from various autism advocacy organizations, agencies and professionals who serve Nevadans with Autism Spectrum Disorder and related Neurodevelopmental Disorders. Our main purpose is to ensure that services are available to all, and to keep you informed of progress in this area.

Cesar Jr. is a sweet little 25-month-old boy that has been enrolled in our Early Intervention program since May, 2019. When Cesar joined our EI family, his family was concerned with his speech and attending to activities. Mother reported that Cesar would not babble, provide eye contact, and had poor eating habits. The family needed support on encouraging joint attention, imitation, and him responding to his name. With the help of Early Intervention, the team set in place the services Cesar needed to begin to reach those missed milestones.

As of today, Cesar has the brightest smile when his therapists enter the home and will immediately grab their hand to sit with him on the floor. He anticipates interactions now and will give amazing eye contact to signal to his team that he wants more and is enjoying their interaction! He has really shown progress in how he is babbling more to his family, interacting with his parents and siblings, and giving joint attention to his therapists.

Alexandra, his mother, says, “Thank you to EI for providing their lovely team, Junior (Cesar) has improved so much in his time with them! He’s communicating so much better and interacting with his brothers more!” — Developmental Specialist, CHHS
Nevada’s Early Childhood Mental Health provides mental health services for children ages birth to six years and their families when children have emotional, behavioral, social or other psychological problems and associated developmental delays. Parents may refer their children for these services. For children ages 3-6 years in need of a higher level of treatment, therapeutic preschool is available.

The goal of services is to strengthen the parent-child relationships, support the family’s capacity to care for their children, and to enhance the child’s social and emotional functioning. The following are provided:

- Behavioral and psychological assessments,
- Individual, family, and group therapies and behavioral management,
- Psychiatric services,
- Day treatment,
- In-home crisis intervention,
- Childcare and pre-school consultation, outreach, and training,
- Clinical case management.

The purpose of the Nevada Early Hearing Detection and Intervention (EHDI) Program is to ensure all children in Nevada are screened for hearing loss at birth. Left undetected, hearing loss in infants can negatively impact speech and language acquisition, academic achievement, and social and emotional development. When diagnosed early these negative impacts can be diminished and even eliminated through early intervention.

“TMG has been in our family for the last 6 years. Devontae is my 6th baby who has received services through TMG!

Not only do I feel TMG has provided each of my children with physical therapy, occupational therapy, feeding therapy, vision therapy, nutrition & speech—I can say each therapist that has come into our home has become part of our family! I can’t thank you enough for all you’ve done for my family”! ~ Foster Mom

“Before TMG, Indiana pretty much let his older sister Emma do all the talking! Since then he has really found his own little voice, which he uses frequently to request "Baby Shark" and "The Car Wash Song" on the Alexa we don’t have!

Thank you for inviting us to be a part of the TMG family & Special thanks to our amazing team!” ~ Mom

http://dhhs.nv.gov/Programs/IDEA/ProjectASSIST/Fathers

Resources For Fathers provides information and resources especially for fathers of children with special needs, and the professionals who serve them. Also has a “Guide for Dads” available from your early intervention program or online.

World Health Organization’s Commission on the Social Determinants of Health published a study in 2007 that cites early identification and treatment of children who are at risk of developmental delay produces economic benefits up to $17 for each $1 spent on the programs. The earlier the intervention, the lower the overall cost.
The Nevada Dual Sensory Impairment Project works to enhance educational services provided to children and youth, birth through 21 years, with vision and hearing impairments.

The project provides statewide technical assistance to support parents, services providers, and other service agencies in meeting the educational needs of children who have dual sensory impairments.

Individuals who are eligible are those, birth through 21 years of age, diagnosed as having impairments in both vision and hearing or suspected of having such impairments.

The Circle of Inclusion website is for early childhood service providers and families of young children. This site offers demonstrations of and information about effective practices of inclusive educational programs.
“We’ve been with Early Intervention since July, 2019 and have had a great experience. We are so grateful that our Charlize is part of Capability Health and Human Services (CHHS).

We were referred by our pediatrician since our daughter was delayed in her gross motor skills and the therapists and developmental specialist that we were assigned have been awesome! They have helped us with our daughter’s progress in making huge improvements. They help make the exercises and activities fun for her.

A huge thank you to our Developmental Specialists as they have been a wealth of resource and support when our daughter received a diagnosis of her delay.

Their assistance and expertise have been invaluable in directing us on the right track to get the best treatment for our daughter and the support they give through the program along with their compassion and care helped make the process so much easier. We also want to thank our amazing team for their help in recognizing our Charlize’s needs during evaluation and allowing us to be a part of the treatment process and for providing their awesome services. Thank you, Early Intervention, for providing this service to the community. Your organization and services have been a blessing to our family and our community. May God bless you all!” ~ Mom, CHHS

A new study provides further evidence that earlier intervention for autism increases the likelihood that a child will make significant gains in social and communication skills. — Research in Developmental Disabilities, Volume 35, Issue 12, December 2014

- Among the toddlers who entered the therapy program before their second birthday, 90 percent made significant gains.
- By contrast, only 30 percent of the children who entered therapy after 30 months of age made significant gains across the year.

https://medlineplus.gov/ MedlinePlus.gov was created and is maintained by the National Library of Medicine, MedlinePlus is the National Institutes of Health’s website providing trusted health information to the public. Over a million people daily benefit from the health topic pages, a medical encyclopedia, health news, surgery videos, a medical dictionary and much more.

Includes a Spanish language version of the site, MedlinePlus en español.
Nevada Family Resource Centers (FRC) provide case management, information, and referrals for individuals and families in need of assistance in accessing services and programs that will strengthen and support the family.

FRCs collaborate with other private and public agencies, government agencies, schools, and faith-based organizations to assist families to obtain needed services.

FRCs emphasize community based, collaborative services that are culturally competent, accessible, and flexible.

Nevada Early Intervention Services (NEIS) - Reno provides family-centered early intervention services and supports to northwest Nevada and its rural communities. NEIS provides most services in homes or community-based environments for children with developmental delays and their families. They recognize the important role of the family in a young child’s development and assist parents in their natural role as teachers to help meet their child’s special needs.

The Arc is committed to all people with developmental disabilities, and works to develop programs, funding and public policy that will assist them in realizing their goals of learning, living, working, worshiping and playing in the community.

"Telehealth use has increased 8,336% nationally. . . That increase was almost entirely due to the effects of the pandemic lockdown...” – https://www.usnews.com/news/healthiest-communities/articles/2020-07-13/telehealth-continues-rapid-growth-amid-coronavirus-pandemic

“My little one received his evaluation for Nevada Early Intervention Services (NEIS) in late January. He qualified for the program based on his profound speech delay, only two words at 18 months old. I was so excited to have him start therapy with the hope that he would FINALLY be able to communicate.

We had three in person sessions with the developmental specialist and speech therapist before “the lockdown” started. I learned so much in those in person sessions and Lincoln was becoming more receptive to attempting signs and sounds. Then, suddenly, the sessions were on "pause," much like everything else in our lives.

After a few weeks, we heard that our sessions would resume, but virtually. I was disappointed and skeptical. I remember telling my sister in law, "I just don’t see how this is going to work."

Well, I was wrong! In fact, because the model of NEIS is to provide the caregiver with tools to facilitate your child’s development, it was actually quite easy. I ran around following Lincoln with my phone, and the providers observed and gave feedback, tips, and encouragement. I went from feeling so hopeless to very empowered, and Lincoln has made so much improvement over the last few months thanks to the virtual care from our NEIS team.” ~ Mom

"An extensive body of research indicates that high quality early intervention for at-risk infants, toddlers and young children and their families is a sound economic investment. Studies have found a number of long-term cost savings in terms of decreased grade repetition, reduced special education spending, enhanced productivity, lower welfare costs, increased tax revenues, and lower juvenile justice costs.” — The Long Term Economic Benefits Of High Quality Early Childhood Intervention Programs, December 2005
Nevada Disability Advocacy & Law Center (NDALC) is Nevada’s federally mandated protection and advocacy system for the human, legal and service rights of individuals with disabilities. NDALC will advocate to ensure that children with developmental disabilities obtain appropriate and timely early intervention services and transition services. NDALC will provide direct representation at Individualized Family Service Plan (IFSP) meetings in select cases that address serious systemic issues.

NDALC will provide direct representation and advocacy, as resources permit, to children with disabilities to improve access to needed early intervention services available under Part C of IDEA, and to improve timely transition services from Part C to Part B of IDEA.

Brayden, (lovingly known as Brady) has been with Capability Health and Human Services for a little over a year. His parents enrolled in Early Intervention, concerned about his speech delay, trouble with attending to activities, and sensory processing. With the help of the IFSP team and his parents continuous support of implementing strategies given during sessions, parents were given the tools needed to help build Brady’s speech development and to create learning activities and routines that benefit not only Brady, but the entire family.

Brady’s parents report that he is attending to adult-directed activities, is now using some two-word phrases to express himself, and is doing much better with tactile processing and will play with a variety of textures. He was recently enrolled in a playgroup and enjoys working with his playgroup teacher and his peers!

His mother, Hannah, says that she “appreciates the support from his IFSP team and the services provided to help Brady grow and reach those milestones”. — Developmental Specialist, CHHS

https://nevadadrugcard.com/index

NevadaDrugCard—Prescription Assistance Program – As a resident of Nevada, you and your family have access to a statewide Prescription Assistance Program (PAP). Nevada residents can download a FREE card and locate participating pharmacies. This card will provide you with Rx medication savings of up to 75% at pharmacies across the country including Albertsons Sav-on, Kmart, VONS, CVS/pharmacy, Raley’s, Longs, Safeway, Save Mart, Walgreens, Walmart, and many more.

“An early intervention program costing $6,730 per child generated a return on investment of $47,759 for each child. This means that for every $1 invested, $7.10 was returned to society in the form of decreased expenditures. (When similar services for 2nd & 3rd graders were analyzed, results showed a return of only $1.66 for every $1 invested.)” — [AMA, 5/8/01, vol. 285, no.18]
Nevada Governor’s Council on Developmental Disabilities’ mission is to provide resources at the community level which promote equal opportunity and life choices for people with disabilities through which they may positively contribute to Nevada society. The Council utilizes strategies such as training, educating policy makers and communities, coalition development, barrier elimination, and demonstration of new approaches to service.

The Council encourages and supports advocacy, capacity building, and systemic change activities that contribute to a coordinated, consumer driven, family-centered and family-directed, comprehensive system that includes needed community services, individualized supports, and other forms of assistance that promote self-determination for all individuals with developmental disabilities and their families, helping them to be productive, integrated and included in all facets of community life.

Project ASSIST

"Quiero dar gracias a Positively Kids ya que Dios me los puso en el camino mi hijo, Jacob, pudo empezar las terapias temprano, que fueron una gran ayuda porque cada ejercicio que me le daban yo los continuaba haciendo con mi hijo para que el pudiera agarrar movimiento en su cuerpo. El primer reto fue que pudiera sentarse por el solo y con mucha perseverancia lo logramos. Gracias a que Positively Kids estuvo allí para guiarme con las diferentes maneras de terapia y tips de como mi hijo podía hacer el movimiento de su cuerpo. Hoy les quiero dar las gracias porque Positively Kids un muy buen equipo de trabajo que se preocupan por el bienestar de los niños. Hoy yo les puedo contar que mi hijo empezó a dar sus primeros pasos a los dieciséis meses y cuando cumplió dos años el ya caminaba y hoy ya tiene dos años once meses y siento una gran alegría muy grande porque lo veo corriendo, pegándole a un balón de futbol, poniendo la pelota en una canasta de basquetbol, deslizar en los juegos del parque. Como madre me siento muy feliz y que Positively Kids haya estado conmigo para apoyarme grandemente y quiero dar gracias a cada una de las que trabajan para Positively Kids por asistir a mi casa y estar pendiente de todas las necesidades que mi hijo iba teniendo a medida que iba creciendo. Hoy yo puedo decir que mi hijo camina, corre, come muy bien, duerme bien y juega por el solo y ya toma sus propias decisiones en que quiere hacer. Como madre es una alegría inmensa y solo puedo dar gracias a Dios y gracias a Positively Kids por existir, Dios los bendiga siempre". ~ Mamá

[English translation] "I want to thank Positively Kids, God placed you on our path. My son, Jacob, was able to start therapy early on, they have been a great help. Every exercise that I was given, I would continue working them on my son so that he can gain movement in his body. Our first challenge was to get him to sit up on his own and after much perseverance we did it! Thankfully Positively Kids was there to guide me with different kinds of therapies and Positively Kids has done such a great job on taking care of our children's wellbeing. Today I can say that my son began to take his first steps at sixteen months old and when he turned two he was walking. Now he's two years and eleven months and it fills me with so much joy because I can watch him kick a soccer ball, throw the basketball into the hoop and slide on the playground at the park. As a mother I am so happy, Positively Kids has been such a great support for me and I want to thank every single person that works at PK, that has visited my home, you have been on top of everything making sure every need my child had is being met. As my child keep growing, I can say that my child can walk, run, eat really well, sleep and play really well on his own and he's starting to make his own choices. As a mom that gives me immense happiness and I can only give thanks to God and to Positively Kids for existing. May God bless you always" ~ Mom

“The brain grows at an amazing rate during development. At times during brain development, 250,000 neurons are added every minute! At birth, almost all the neurons that the brain will ever have are present. However, the brain continues to grow for a few years after birth. By the age of 2 years, the brain is about 80% of it’s adult size.” — Neuroscience for Kids, University of Washington
The NCED’s mission is to work cooperatively with consumers (people with disabilities, family members, etc.), agencies, and programs to assist Nevadans of all ages with disabilities to be independent and productive citizens, fully integrated into their communities. This mission is accomplished by honoring the diversity of people with disabilities, their families, and those who serve them.

The important principles of self-determination, family-centered care, and cultural competence are reflected in the ways the NCED provides service, training, and technical assistance; conducts research; and disseminates information.

**ZERO TO THREE’s Parent Portal** provides a variety of resources for parents and caregivers of young children in areas such as: Ages and Stages, Social-Emotional Development, School Readiness and Early Learning, Play, Challenging Behavior, Sleep, and Positive Parenting Approaches. Resources designed to help you tune in to what makes your child tick, and to guide you in thinking about the best way to meet your child’s individual needs.
"Hi my name is Alexys! When I was born nobody knew I had a special heart. Not even the Doctors! My mommy and I were life flighted to Salt Lake City, Ut. They transferred me to the Primary Children’s Hospital and they ran different tests and scans on my body. The Dr’s told my mommy and daddy that I needed my first open heart surgery.

After my first successful surgery the Genetics Dr came and told my mommy and daddy that I had an extra chromosome, and I was diagnosed with DeGeorge Syndrome or 22q11.2 deletion.

We’re all learning my syndrome as I grow bigger and stronger. With the help of NEIS I have come such a long way. They always check up on me and make sure I’m headed in the right direction! I look forward to many more visits with them." ~ Alexys/Mom, NEIS-Northeast Region

"Logan had a bit of a rough start in life. Being diagnosed with cataracts and having them removed at 6 weeks old and then developing glaucoma a few months later caused him to have 9 eye surgeries in his first 18 months of life. On top of that he had multiple hospital stays due to asthma.

When we started with Nevada Early Intervention Systems (NEIS) Logan had fallen off the growth curve from 50th percentile to 5th and was falling behind in a lot of areas. Over the 18 months of being with NEIS he has worked with many therapists who have helped tremendously. They were so kind and patient with Logan and taught me the skills and activities that would help my child thrive.

Logan has been able to stay on his growth curve, he started and graduated from speech therapy, and is caught up with almost everything except for what his visual impairments make a little more difficult for him.

Logan turns 3 and will graduate out of the program and we are sad to say goodbye to all the incredible people we have worked with and so grateful for all the help they have provided." ~ Mom, NEIS-Northeast Region

"The hope is that if we can improve intervention with infants and toddlers, many of them will be able to leave their disabilities behind by age 5". — Sally J. Rogers, PhD, Professor of psychiatry and behavioral sciences, M.I.N.D. Institute, University of California Davis Medical Center (2012)
Early Head Start offers comprehensive child development and family support services for birth to three year olds in home-based and center-based programs with or without disabilities.

The individualized home-based program provides visits by certified parent educators trained in child development who help parents understand what to expect in their child’s development. Parents also receive practical tips on ways to encourage learning, manage challenging behavior, and promote strong parent-child relationships.

Center-based programs provide full-day, and full-year services, including high quality child care for infants and toddlers with or without disabilities. Early Head Start promotes infant and toddler health and development; fosters positive family relationships and supports parents as the primary decision makers and nurturers of their children.

“Hi my name is Gustavo. I was born in December, 2017. I was diagnosed with Joubert syndrome and Dandy Walker malformation, which effects all of my motor skills, including the ability to eat things by mouth.

I have been working with Carson City NEIS since I was five months old. Thanks to my wonderful team and lots of hard work, I have accomplished so many goals! My next goals are to walk with some support, and eat more solid food, and graduate from early intervention!

Thank you to all of the members of Carson City NEIS for their love and support!” ~ Gustavo/Mom

Early Childhood Special Education Library

One of the resources available to families, service providers, students, and teachers working with young children with disabilities or special health care needs is the Central Directory’s lending resource library, updated frequently with new books or videos. This large collection of books and videos is a tremendous source of information for parents and professionals in the care and education of a young child with a disability.

These library materials are available for use statewide at no cost to our families.

For more information, please contact your service provider or coordinator.
