## 2019 STD Fast Facts

### NEVADA DIVISION OF PUBLIC AND BEHAVIORAL HEALTH

Office of Public Health Investigation and Epidemiology

Sexually Transmitted Disease (STD) Prevention and Control Program

**Steve Sisolak, Governor**  
*State of Nevada*

**Lisa Sherych**  
*Administrator*

**Richard Whitley, MS, Director**  
*Department of Health and Human Services*

**Ihsan Azzam, Ph.D., M.D.**  
*Chief Medical Officer*

## PURPOSE

The purpose of the *Nevada 2019 STD Fast Facts* report is to provide an analysis on all sexually transmitted diseases (STD) reported in 2019 in Nevada. This annual publication is meant as a reference document for policy makers, program managers, health planners, researchers, and community members concerned with the public health implications of the diseases presented. The figures and tables in this edition supersede those in earlier publications.

## METHODS

The data used for this profile are between January 1, 2018 to December 31, 2018; was obtained from the NEDSS-Based System (NBS). The NBS database application is provided by the Centers for Disease and Control and Prevention (CDC) and maintained by the Division of Public and Behavioral Health (DPBH) for the STD Prevention and Control Program. The data are collected from medical labs, private and public health providers, clinics, and state and local disease intervention specialists (DIS). The STD case definition for this report utilizes the 2018 CDC Case Definitions. Per the CDC, a patient may be infected with multiple diseases at the same time, and while a patient may contract STDs multiple times in the calendar year, only the first incidence of the disease is counted within a 30-day period.

## TECHNICAL NOTES

Nevada Administrative Code (NAC) 441A.040 mandates that Chlamydia, Gonorrhea, Syphilis, and congenital Syphilis are reportable communicable diseases. Additionally, Nevada Revised Statute (NRS) 441A.150 requires that a diagnosis of Chlamydia, Gonorrhea, or Syphilis is to be reported to the local health authority by all providers, medical facilities, and laboratories.

Unknown categories (including percentage and incidence calculations) within the report are due to missing data on gender, race/ethnicity, full address, and age; they are still required reporting according to the NAC. Local health authorities do conduct investigations to complete these cases, but due to limited staff and funding some cases are not complete.

**Crude rates** are calculated using 2019 population projections from the Nevada State Demographer. Rates are based on per 100,000 persons.

**n (used for birth sex stratification)** is the basic measure of disease and may not equal the total case count (N) due to unknown demographic information.

**N (Total case count)** is the total number of disease cases in the population.

**N/A (notation)** is used to represent cases where the data may not meet the criteria for reliability, data quality, or confidentiality due to small data counts or the inability to calculate data rates based on an equivalent population.

**Population** is based on the 2019 population projections from the Nevada State Demographer.

**RC (Rate Change)** is the difference in rates between 2018 and 2019 data divided by the 2018 data.

**RD (Rate Difference)** is the difference in incidence rates between 2018 and 2019 data.

**RSE (Relative Standard Error)** the publication contains counts under 12, please use caution when interpreting the data as the RSE is greater than 30%.
