Background and Purpose

The Nevada Patient Protection Commission (PPC), Office of the Director, Department of Health and Human Services (DHHS), was created through a Governor sponsored bill in 2019 that was codified at NRS 439.902 - NRS 439.918. The commission is charged with systemically reviewing issues related to the quality, accessibility, and affordability of health care in Nevada; and in so doing, making informed recommendations to the Nevada Governor's Office, the Legislature, DHHS, local health authorities and any other person or governmental entity. Under the guidance of the Patient Protection Commission (PPC), the Office of Analytics (OOA), DHHS, is participating in the Peterson-Milbank Program for Sustainable Health Care Costs. This initiative aims to improve the affordability and transparency of Nevada's health care by setting cost benchmarks and assisting policy makers in implementing growth plans.

On December 27, 2021, Nevada Governor Steve Sisolak issued *The Nevada Health Care Cost Growth Benchmark* (Executive Order 2021-29) in which the health care cost growth target is established for 2022 through 2026. This Executive Order sets a benchmark of 3.19 percent cost growth for year 2022 when compared to the prior year's spend. The intent of this order is to curb the climbing health care costs for all residents of Nevada, regardless of pay and provider.

According to the Kaiser Family Foundation, State Health Facts, Nevada had a 4.6 percent average annual per capita growth rate in health care expenditures (1991 - 2014)¹. Nevada Medicaid is the largest provider of health coverage in Nevada, covering approximately one in four Nevadans. Medicaid accounted for 30 percent of State expenditures in Fiscal Year 2021, with a year-over-year caseload growth of 215,324 Nevadans, or 33.5 percent.

The purpose of this report is to monitor the per capita health care cost growth of Nevada's Medicaid population. In future years, and as data become available for additional payers through the development of Nevada's All Payer Claims Database, this report will be expanded to encompass additional insurance market data to measure statewide health care spending across all payers and markets.

Methodology

This report relies on Medicaid claims data (Fee-for-Services (FFS) and Managed Care Organizations (MCO)) extracted from the Nevada Medicaid Data Warehouse for the years 2016 through 2020. In addition to a comprehensive market analysis, claims have been analyzed at five levels, including spend by:

- Plan Type
- Service Category
- Geography
- Age
- Gender

¹ Kaiser Family Foundation, State Health Facts, <https://www.kff.org/other/state-indicator/avg-annual-growth-per-capita/?currentTimeframe=0&sortModel=%7B%22colId%22:%22Location%22,%22sort%22:%22asc%22%7D>.

Accessed June 1, 2021.

In March of 2020, Nevada declared a State of Emergency in response to the COVID-19 pandemic. While essential health care services were permitted to stay open, health care providers had to adjust the delivery of health care services. Routine patient services were postponed or cancelled during this time. Additionally, non-essential businesses were closed, causing an increase in unemployment which led to a 35 percent increase in Medicaid enrollment.

Nevada’s Medicaid enrollment also increased due to the Division of Welfare and Supportive Services, DHHS, federally mandated pause on redeterminations in line with the public health emergency. Due to this pause, the eligible population has mostly maintained their coverage since March 2020. Simultaneously, OOA observed lower utilization patterns through the pandemic, thought to be driven by personal choice of both consumers and providers to limit exposure. Because of these factors, the figures presented for Calendar Year (CY) 2020 greatly differ from the CY 2016-2019 mean. More specifically, data from CY 2020 is likely lower than what would have been experienced in a more typical year for health care delivery. While this report includes 2020, the trend analysis will focus on the pre-pandemic CYs 2016 through 2019.

Paid claims and encounters were used in this analysis and therefore the MCO spend is reflective of the cost of care to the managed care organizations and not the direct capitation cost to the State of Nevada. For technical notes and tables to correspond with the charts in this report, please refer to the appendices.

Numbers in this report may not match exactly with previous versions.

Definitions	
Per Member Per Month (PMPM)	Monthly Spend / Unique Member Monthly Enrollment. Average annual PMPM is the amount paid on a monthly basis for each member averaged over the 12-month period in the CY.
Utilizer	Members with an associated billing claim for the given month.
Non-Utilizer	Members without an associated billing claim for the given month.
Per Utilizer Spend	Monthly Spend / Unique Monthly Utilizers. This calculation includes only members who have an associated billing claim for the given month.
Utilization	The frequency at which utilizers are accessing services. The monthly total number of claims or visits submitted and then averaged over the 12-month period (CY).
Volume	Number of visits for services or filled days for prescription drug claims / Total Utilizers for a given month averaged over the 12-month period.
Fee-for-Service (FFS)	Nevada Medicaid sets rates and pays providers directly for services provided to recipients. A fee for service rate is reimbursement for specific services provided, like an office visit or lab test. These payments are made after the service is provided to the recipient. FFS is available to people who live outside urban counties or members who are aged, blind, and/or disabled.
Managed Care Organization (MCO)	Medicaid managed care plans are paid a per member per month contracted rate (capitated rate) based on client demographics, projected utilization, and plan administrative costs. Monthly capitated payments are made to the MCOs in advance, creating a pool of funds from which the MCO reimburses for provided services and uses to cover administrative costs. Managed care is only available in Clark and Washoe counties.

Annual percentage
growth rate

Calculated percentage change based on the prior year.

Executive Summary

This report considers trends in spend and utilization for medical care and prescription drugs through Nevada Medicaid from 2016 to 2020. Throughout the report, analyses are broken down into five service categories: inpatient hospital, outpatient hospital, professional services, dental services, and pharmacy services. Trends are based on the per member per month (PMPM) spend, averaged annually. The baseline year for future analyses will be 2021, and the first performance year is 2022. Future reports will be based on trends observed over a multi-year period.

We find that overall pre-pandemic PMPM spend grew 17.2 percent from 2016 to 2019, and subsequently declined by 4.6 percent from 2019 to 2020 for a net increase of 11.9% since 2016. When we consider the entire analysis period from 2016 to 2020, PMPM spending growth averaged 3.3 percent. Over the four-year pre-pandemic period from 2016 to 2019, year-over-year spending growth averaged 5.5 percent per year.

We can compare growth in Medicaid spend to growth in per-capita gross domestic product (GDP) and median wage, as these were factors that contribute to the cost growth benchmark defined in the Governor's Executive Order. Average annual growth in per-capita gross domestic product (GDP) was 4.2 percent² over the same period (2016 to 2019). The year-over-year health care cost growth exceeded the growth of per-capita GDP by 1.3 percent. Per capita GDP is a measure of a state's output per person. Spend also exceeded growth of the Nevada median wage. For comparison, the Nevada median wage had an average annual increase of 1.8 percent (year over year 2016-2019) and a net increase of 6 percent from 2016 to 2019.

In 2019, PMPM spend reached an all-time high for Nevada's Medicaid population, at \$415, before declining to \$396 in 2020. The greatest single year increase in the observed period (+8.6 percent) took place from 2018 to 2019, when the average monthly PMPM rose from \$382 to \$415.

Higher PMPM spend was observed consistently among the fee-for-service (FFS) population when compared to the managed care (MCO) population. More specifically, FFS spend increased from 2016 (\$683) to 2020 (\$828) for an average annual increase of 5.1 percent. MCO spend increased 27.2 percent from 2016 (\$206) to 2019 (\$262) but subsequently decreased by 8.6 percent in 2020 (\$239). The overall average annual increase from 2016 to 2020 was 4.1 percent.

Prior to CY 2020, PMPM spend increased in all service categories considered in this report. While all service categories show health care costs growing, long-term care and outpatient claims observed the highest percentage increase from 2016-2019, at 27 percent and 21 percent.

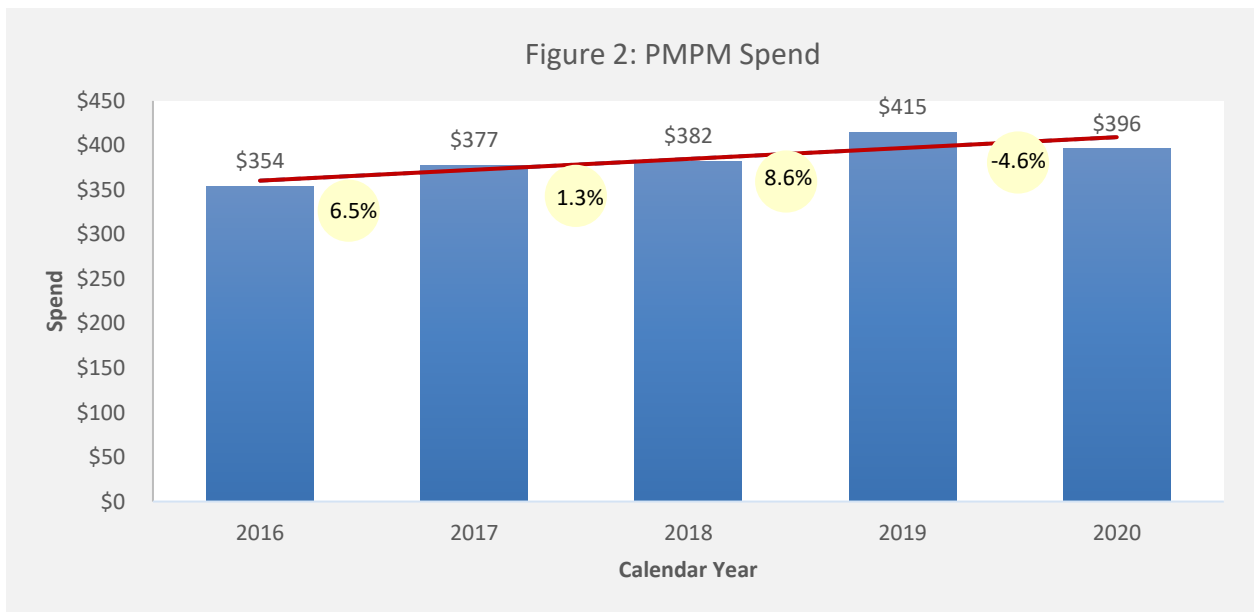

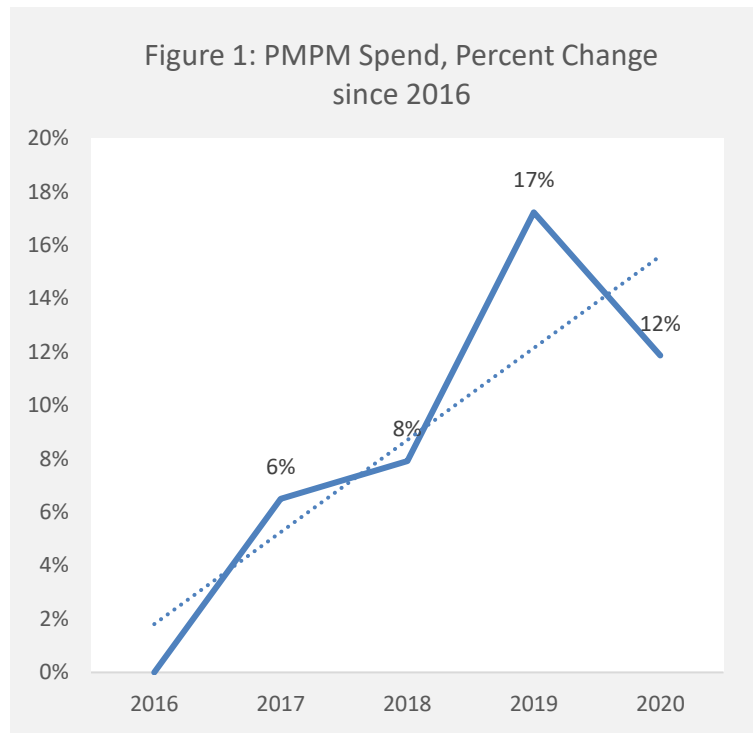

Analysis

Per Member Per Month (PMPM) Spend

This report drills down in Nevada Medicaid spending, volume, and average price for medical care spanning a five-year period from CY 2016 through 2020. PMPM costs increased 17 percent in the pre-pandemic years of 2016 to 2019.

The average annual PMPM spend increased from \$354 in 2016 to \$415 in 2019. From 2019 to 2020, the average PMPM decreased from \$415 to \$396, a decrease of 4.6 percent. The average monthly enrollment of members increased 8.4 percent in 2020 from 2019. Prior to CY 2020, the average cost growth per year was 5.5 percent with the greatest increase appearing from 2018 to 2019.

Figure 1 to the right represents the percent change in growth over the five-year period, using 2016 as the base year.

Spend by Plan Type

Nevada Medicaid has two plan types, FFS and MCO. Persons who live in rural and frontier counties are placed in FFS. In addition, FFS enrollees include the portion of the population who are aged (65 years and older), blind, and/or disabled (ABD), regardless of geographic location.

FFS is the smaller share of the Medicaid population (currently at about 30 percent) compared to members enrolled into an MCO benefit plan which covers members who reside in the urban areas of Washoe and Clark counties. However, because individuals who are eligible for Nevada Medicaid under the ABD aid category are a high-cost subgroup, they drive up FFS costs in general.

Figure 3: PMPM Spend, Utilization, Spend per Utilizer; Percent Change since 2016

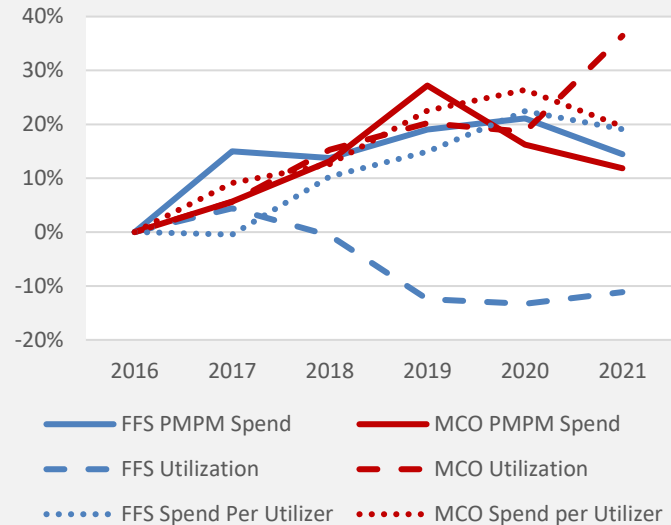

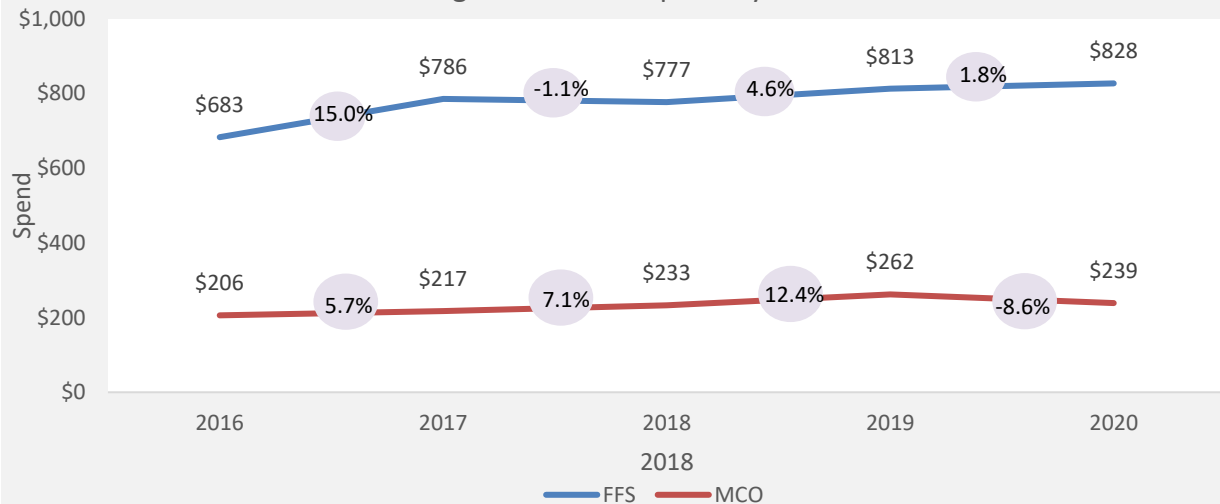

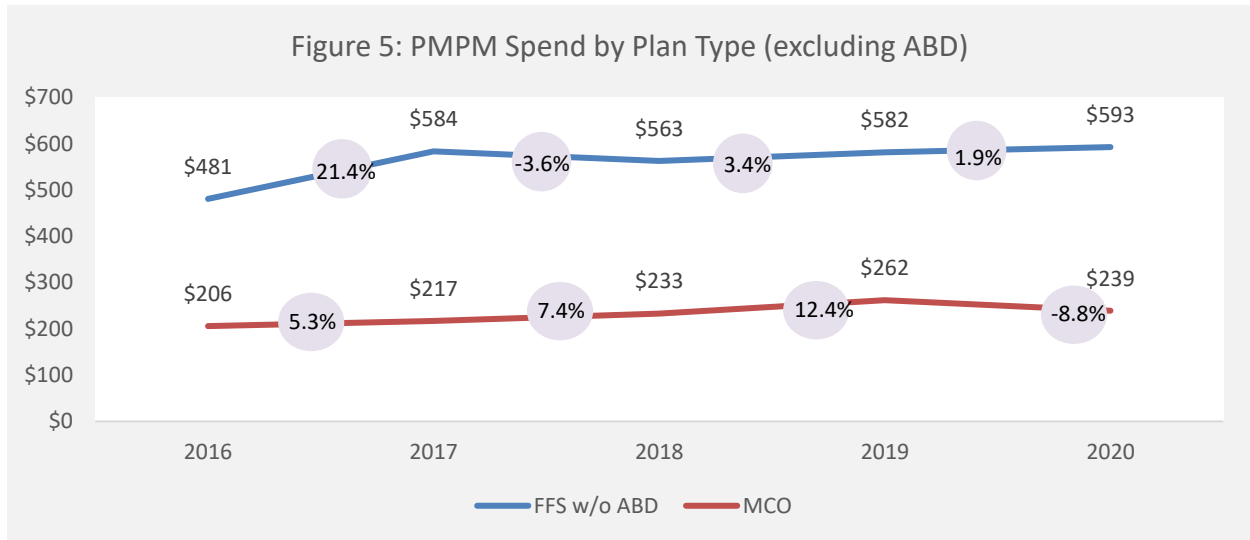

Figure 4: PMPM Spend by Plan

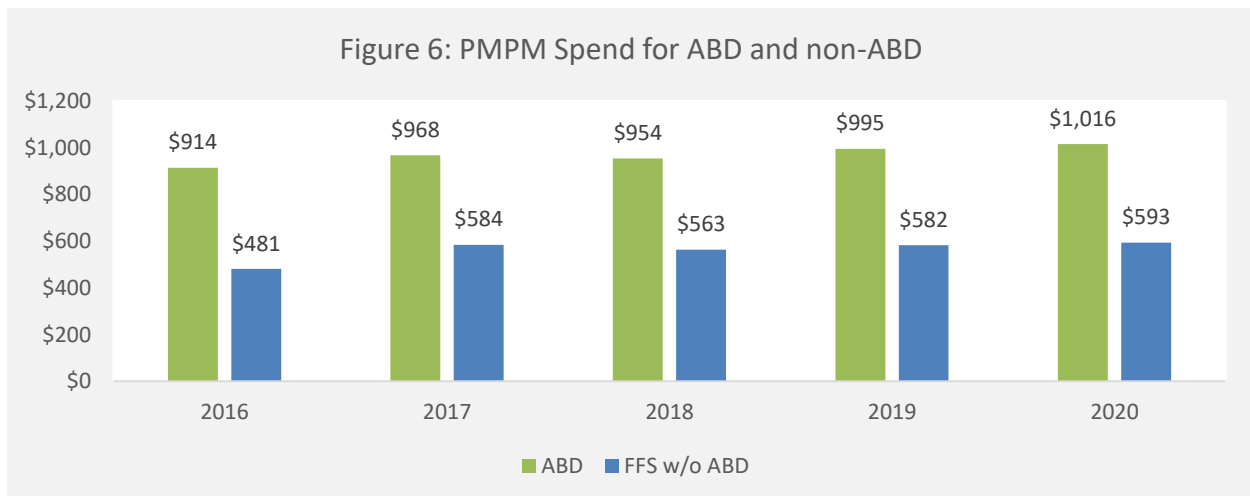

Growing health care costs are present in both plans. Although FFS utilization has trended down since 2017, the PMPM spend has climbed presenting a net increase of 19 percent from 2016 to 2019. The MCO population has shown a net 27.2 percent increase in PMPM spend from 2016 to 2019, as well as a steady utilization increase. While the PMPM declined from 2019 to 2020, utilization remained stable.

PMPM spend has increased for both plan types from 2016 to 2019. The average annual percent increase was 6.2 percent in the FFS population and 8.4 percent in the MCO population. However, when the 2020 PMPM is factored into the calculation, the average percent increase is reduced to 5.1 percent for FFS and 4.1 percent for MCO.

As mentioned previously, it is important to acknowledge the outliers in the FFS population specific to the ABD population. When excluding the ABD eligible population from FFS, we identify a different overall PMPM trend. FFS PMPM, excluding the ABD population, increased by 21.4 percent from 2016 to 2017 and subsequently declined 3.6 percent from 2017 to 2018. In 2019 and 2020, FFS PMPM excluding ABD increased by 3.4 percent and 1.9 percent, respectively. Still, PMPM spend for FFS excluding ABD is consistently higher than that for the MCO population.

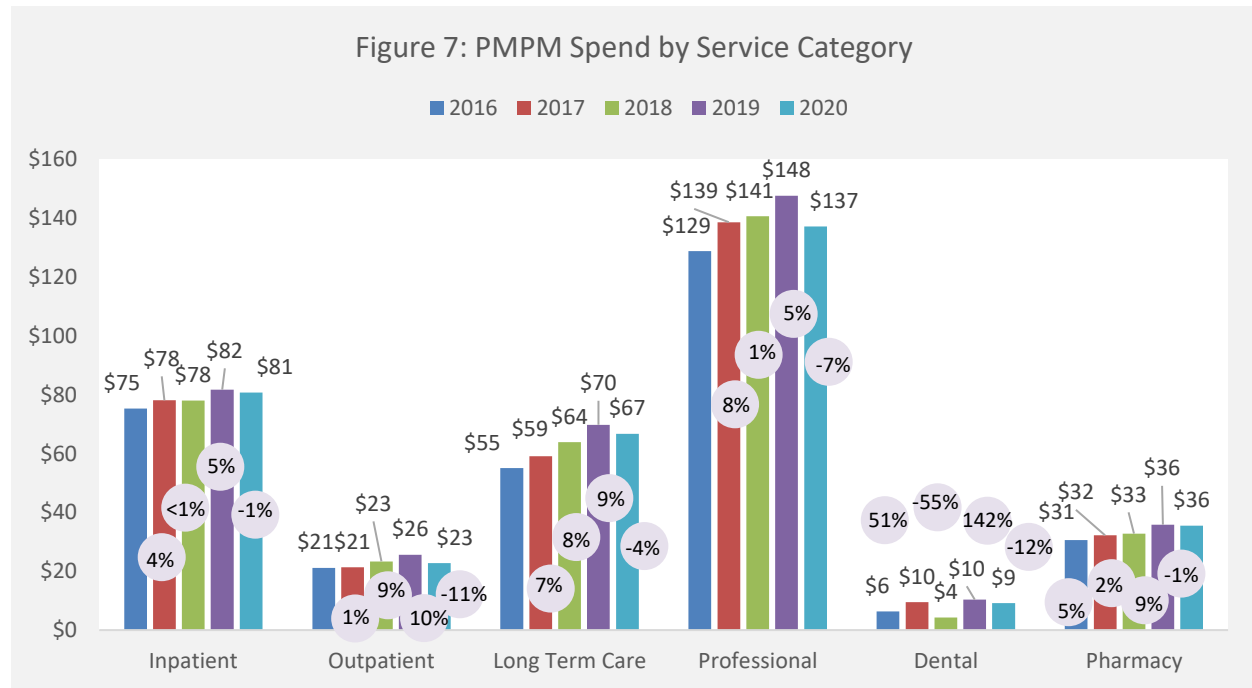

In general, the PMPM cost for ABD eligible Medicaid members is more than two times that of other FFS eligible members. In 2019 the PMPM for the ABD population was \$995 while the PMPM for the non-ABD FFS population was \$582. In 2020, where a general decline in spend was observed nearly across the board, Nevada Medicaid saw an increase in PMPM spend for the ABD population of 2.1 percent. It is important to note that 81 percent of the population residing in rural and frontier counties (FFS covered) reside in a designated health professional shortage area (HPSA)². This also contributes to a higher PMPM spend.

²University of Nevada, Reno, School of Medicine, Office of Statewide Initiatives, Nevada Rural and Frontier Health Data Book – 10th Edition page 166 Table 5.48, <https://med.unr.edu/statewide/reports-and-publications/nevada-rural-and-frontier-health-data-book> February 2021. Accessed September 18, 2021

Spend by Service Category

Medicaid health care claims were categorized into six categories: Inpatient Hospital, Outpatient Hospital, Long-Term Care, Professional, Dental, and Pharmacy. The pharmacy spend below incorporates manufacturer rebates which occur in later transactions. To estimate pharmacy spend after rebates, a weighted average of the annual rebate percentage was calculated for the 5-year period and then deducted from annual pharmacy spend prior to the PMPM calculations below. Rebate amounts could occur at any time. After rebate adjustments were applied, average annual pharmacy PMPMs averaged \$33 from 2016 to 2020, with the highest PMPM observed at \$36 in 2019 and 2020.

Prior to CY 2020, PMPM spending increased in all service categories. Spend per visit has also increased across the board, while patterns in utilization have fluctuated by service category.

Table 1: PMPM, Utilization, and Spend per Visit, 2016 and 2019

SERVICE CATEGORY	2016			2019		
	PMPM	Utilization	\$ per Visit	PMPM	Utilization	\$ per Visit
INPATIENT HOSPITAL	\$75	10,286	\$4,821	\$82	10,694	\$5,209
OUTPATIENT HOSPITAL	\$21	53,629	\$243	\$26	58,652	\$284
LONG-TERM CARE	\$55	151,453	\$6,068	\$70	161,145	\$6,408
PROFESSIONAL	\$129	540,182	\$124	\$148	540,699	\$146
DENTAL*	\$6	28,811	\$151	\$10	36,340	\$195
PHARMACY	\$31	332,491	\$61	\$36	351,054	\$70

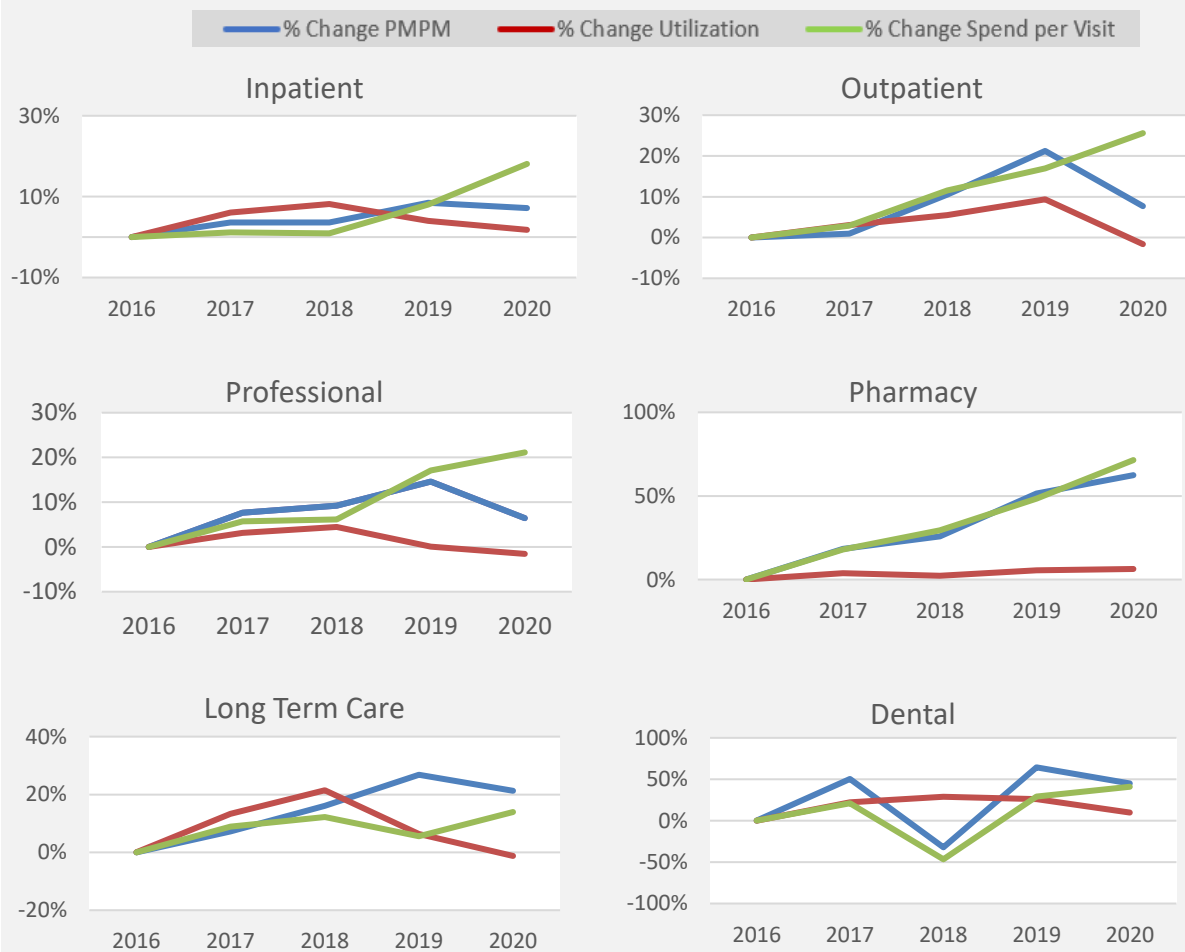

Table 2: PMPM, Utilization, and Spend per Visit; Percent Change since 2016.

SERVICE CATEGORY	CY 2016 - CY 2019			CY 2019 - CY 2020		
	PMPM	Utilization	\$ per Visit	PMPM	Utilization	\$ per Visit
INPATIENT HOSPITAL	8%	4%	8%	7%	2%	18%
OUTPATIENT HOSPITAL	21%	9%	17%	8%	-2%	26%
LONG-TERM CARE	27%	6%	6%	21%	-1%	14%
PROFESSIONAL	15%	<1%	17%	6%	-2%	21%
DENTAL*	64%	26%	29%	45%	10%	41%
PHARMACY	17%	6%	15%	16%	6%	22%

MONTHLY ENROLLMENT AVERAGES	2016	2017	2018	2019	2020	2016-2019 % +/-
	657,877	681,803	693,007	681,387	738,808	4%

*Please note that the percent change shown in the dental claim service category is due to a change in billing policy and does not represent a price increase

Figure 8: PMPM, Utilization, and Spend per Visit; Percent Change since 2016

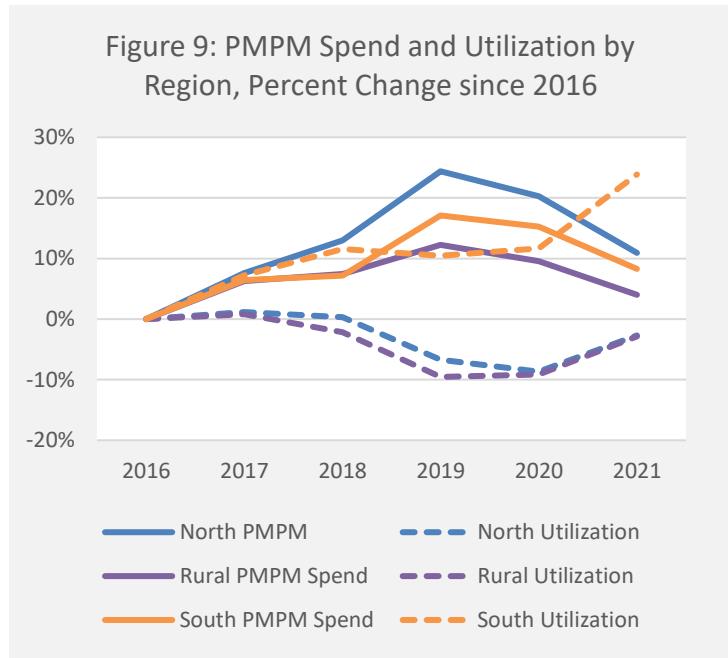

Spend by Demographics

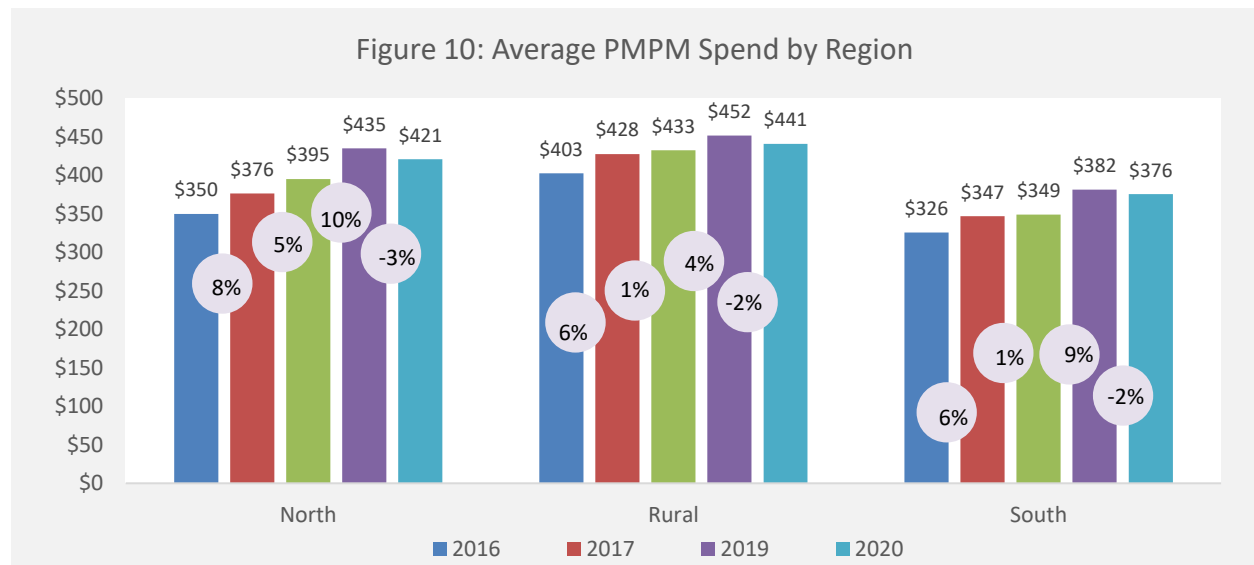

Geography

The unique geography of Nevada calls for a regional split of the Northern region, comprised of Washoe County and Carson City; the Southern region, comprised of Clark County; and the rural region, comprised of Douglas, Storey, Lyon, Humboldt, Pershing, Churchill, Mineral, Esmeralda, Nye, Elko, Lander, Eureka, White Pine, and Lincoln counties.

Utilization tracks similarly in the Northern and Rural regions, both showing a decrease from 2016 to 2019 and remaining somewhat consistent from 2019 to 2020. In the South, utilization increased 12% from 2016 to 2020, with most of the increase occurring from 2016 to 2017, and then remaining relatively flat from 2018 to 2020.

As utilization steadied or decreased, PMPM costs peak in 2019 for all regions. PMPM cost was consistently highest in Rural Nevada, at \$452 in 2019 and \$441 in 2020. Northern Nevada and Southern Nevada had PMPM costs of \$435/\$382 respectively in 2019 and \$421/\$376 respectively in 2020.

²University of Nevada, Reno, School of Medicine, Office of Statewide Initiatives, Nevada Rural and Frontier Health Data Book – 10th Edition page 166 Table 5.48, <https://med.unr.edu/statewide/reports-and-publications/nevada-rural-and-frontier-health-data-book> February 2021. Accessed September 18, 2021

Increases to PMPM costs are typically either driven by increases in utilization and/or increases in cost per service and not spend per utilizer. This page is included as an exception to provide a deeper analysis into geographic areas. This only includes members who utilized services during the time period. Per utilizer spend increased in all regions at similar rates, but the highest increase was shown in the Northern region. The pie chart below shows the average percent of members who utilize services monthly. The average annual percent of utilizers remains steady with about 40% of enrolled members accessing services per month.

When drilling down to the price per utilizer, costs increased without pause over the 5-year period. The cost increase could be attributed to rising prices or additional resources used to treat patients. Further analyses are needed to determine the cause.

Figure 11: Average Monthly Percent of Utilizers

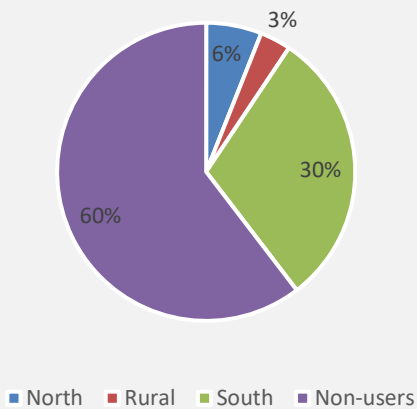

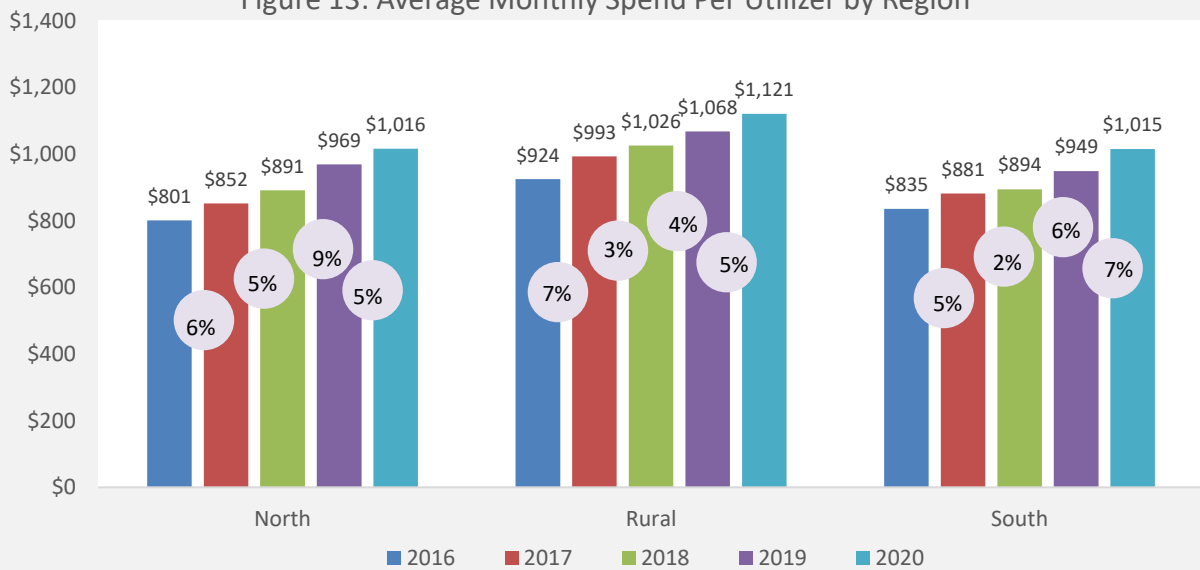

Figure 13: Average Monthly Spend Per Utilizer by Region

Age

Spending varies greatly by age group. Medicaid recipients aged 1 through 17 years had the lowest PMPM costs while adults aged 55 years and older had the highest PMPM costs. PMPM spend consistently grew from 2016 through 2019 for all age groups. The highest increase in PMPM spend occurred in the adult population (ages 18-34), where spend increased 19.9% from 2016 to 2019. However, the highest increase in PMPM spend through 2020 occurs in the infant population at 24.5 percent. PMPM spend increased in adult Medicaid members ages 18-54 by 18 percent from 2016 (\$433) to 2019 (\$513).

Utilization decreased for infants, children, and adolescents ages 17 years old and younger since 2017 and increased in the adult populations.

Adults aged 65 and older are eligible for Medicare. However, if these adults meet the income threshold for Medicaid, they are dually covered by Medicare and Medicaid FFS.

Figure 14: PMPM Spend, Percent Change

Figure 15: Utilization by Age, Percent Change since 2016

Figure 16: PMPM Spend by Age Group

Gender

PMPM spend has grown consistently for men and women at an average annual increase of 5% for women and 6% for men from 2016 to 2019. For women, average annual PMPM spend increased from \$346 in 2016 to \$400 in 2019, and subsequently decreased by 5.6 percent from \$400 to \$378 in 2020. For men, the average annual PMPM spend increased 19 percent from \$363 in 2016 to \$433 in 2019, and subsequently decreased by 3.2 percent from \$433 to \$419 in 2020.

Men are growing slightly in utilization than women, however, still utilize their Medicaid benefits less frequently. Men also have a slightly higher growing health care cost as shown in the PMPM spend percent change. The percent change in utilization shows an increase in 2016–2018 and then a decline from 2018-2020.

Figure 17: PMPM Spend, Percent Change since 2016

Figure 18: Utilization, Percent Change since 2016

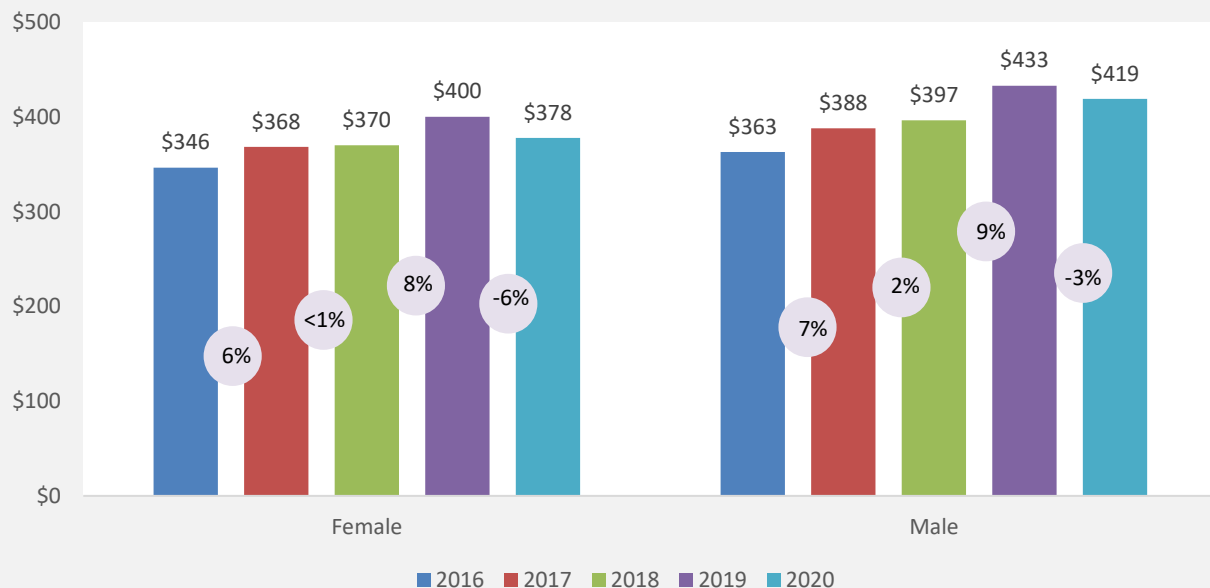

Figure 19: PMPM Spend by Gender

Conclusions and Policy Implications

The four-year average annual cost growth from 2016 to 2019 is demonstrated to be 5.5 percent. This is higher than the health care cost growth target which was set at 3.19 percent by the Governor's Office in the 2021 Executive Order. In CY 2020, Nevada Medicaid shows either a decrease or a stabilization in utilization in almost every subcategory, while enrollment increased due to the COVID-19 pandemic, which results in a lower overall PMPM spend. However, in the instances where spend per utilizer is shown, increases in spend continue through 2020.

With PMPM spend increasing as utilization declines, we find that health care cost growth in Nevada Medicaid is driven primarily by increases in spend per utilizer rather than increased utilization.

The FFS plan type is significantly more costly than MCO on a per member level, largely driven by the ABD population.

The highest proportion of PMPM spend within Nevada Medicaid is spent on professional services, although spend in this service category is largely driven by utilization and not high costs per service. Inpatient hospitalizations and long-term care contribute to the second and third highest spend categories for Nevada Medicaid and have significantly higher costs per service.

Geographically, PMPM spend is highest in Rural Nevada while utilization volume is concentrated in Southern Nevada. When we consider spend per utilizer, Northern and Southern Nevada are similar, while Rural Nevada observes a higher monthly cost per utilizer. Northern Nevada experienced the highest growth rate in PMPM spend, at 24.4 percent from 2016 to 2019. Southern Nevada experienced PMPM spend growth of 17.1 percent over the same period. Finally, Rural Nevada saw PMPM spend increase 12.3 percent over those four years. In any given month approximately 30.9 percent of Nevada's Medicaid members utilize health care; 30.3 percent utilize services in southern Nevada, while 6.2 percent utilize services in northern Nevada and 3.4 percent utilize services in rural Nevada.

Adults aged 18-34 and infants drive PMPM spend by age group, followed by adults aged 35-54 years old. From 2016 to 2019, adults aged 18-34, observed the highest average annual PMPM growth at 6.3 percent year over year. Infants aged less than 1 year old were the only age group to observe a PMPM increase from 2019 to 2020, up 6.7 percent year over year.

Men utilize their Medicaid benefits less frequently than women; however, they have a slightly faster growth in health care cost. In the period from 2016 to 2019, men and women experienced PMPM cost growth of 19.2 percent and 15.6 percent, respectively.

If Nevada Medicaid spend continues to grow at the current rate, and if that rate is comparable in other markets, then the growth rate will continue to exceed the cost growth benchmark of 3.19 percent (2022) as set in the Governor's Executive Order.

Next Steps

This report succeeds in completing the first iteration of an annual health cost driver analysis for Nevada Medicaid by providing a baseline cost growth rate and creating the discussion for the next set of reports

to be developed. Future phase two analyses will include more specific drill down reports which will inform policy makers where to direct resources to mitigate the growing health care cost within Nevada Medicaid.

A major area of interest generated in the completion of this report is primary care investment. As discovered, there is a considerable difference in the number of members who are utilizing services and the number of members who are enrolled. Proper primary care investment would show members utilizing primary care providers more frequently. To gauge the investment and return of primary care prevention, the study will include an in-depth look at the use of primary care providers in the overall population and will also include a comparison of primary care provider use and outpatient hospital use. In addition, Further analysis will also include a drill down into the utilization patterns of members, and a study of chronic disease. These additional drill down reports will be released in late 2022/early 2023.

Under the oversight of the PPC, the Office of Analytics will also work in collaboration with the Division of Health Care Financing and Policy, DHHS, and the Division of Insurance, Department of Business and Industry, to collect, validate, analyze, and interpret similar reports which will be voluntarily submitted by payers in the State of Nevada as part of the Governor's cost growth benchmarking initiative. In 2023 the Office of Analytics aims to consolidate these data into a report in order to define a statewide measure for health care cost growth and evaluate cost growth compared to the established benchmark of 3.19 percent.

Table 20: PMPM by Gender	11

This report was created by the Office of Analytics, Medicaid Unit, Director’s Office, Nevada Department of Health and Human Services (DHHS). Unless otherwise noted, this information comes from the Nevada Medicaid Data Warehouse.

The Division of Health Care Financing and Policy (DHCFP), DHHS, data warehouse is comprised of claims data submitted by over 35,000 Medicaid providers from within Nevada and across the country. While DHCFP staff conscientiously make every effort to validate these data through continuous provider education and the use of highly experienced audit staff, the Division relies heavily on providers to submit accurate and complete information on Medicaid patients. It should therefore be understood by the users of DHCFP reports on disease morbidity and patient health that the data source for these reports are based solely on patient claims data and may not be a complete and comprehensive health record. The data for this report is procured from databases that are currently being modernized from their legacy versions. Considering the unpredictable technical challenges that may arise during the migration of data from legacy to modernized versions of the databases, it is advised to use the data with caution.

Calculating Gross Domestic Product and Median Wage

Per Capita Gross Domestic Product (GDP) for Nevada was calculated using the annual figures “All Industry Total” from the Bureau of Economic Analysis (BEA) divided by the population as reported on the Personal Income Summary: Personal Income, Population, Per Capita Personal Income.

GDP in millions:

	2016	2017	2018	2019	2020
US Dollars	151,840.4	160,785	170,352.9	181,743.3	170,943.8

State Population:

	2016	2017	2018	2019	2020
Nevada Residents	2,919,555	2,972,097	3,030,725	3,090,771	3,138,259

Per Capita GDP in Current Dollars:

	2016	2017	2018	2019	2020
Per Capita GDP in Current Dollars	\$52,008	\$54,098	\$56,209	\$58,802	\$54,471
Year over Year (YOY) Percent change		4.0%	3.9%	4.6%	-7.4%

This data is pulled from the BEA website: <https://apps.bea.gov/itable/iTable.cfm?ReqID=70&step=1>

Median wage for Nevada was pulled from the US Bureau of Labor Statistics website: <https://www.bls.gov/oes/tables.htm>

	2016	2017	2018	2019	2020
Median Wage	34,510	34,930	35,550	36,410	38,580
Percent Change		1.2%	1.8%	2.4%	6.0%

Average Per Member Per Month (PMPM) Spend

The following tables provide background information for the data figures presented in the Nevada Medicaid Cost Driver Report, October 2022.

Table 1: PMPM Spend and Percentage Calculations

	2016	2017	2018	2019	2020
PMPM	\$354	\$377	\$382	\$415	\$396
YOY Percent Change		6%	1%	9%	-5%
Change Since Base		6%	8%	17%	12%

Table 2: All Member Data Table

	Average Members Per Month	Average Utilizers Per Month	Average Monthly Spend	Total Annual Spend	YOY Percent Increase Members	YOY Percent Increase Utilizers	YOY Percent Average Spend	YOY Percent Increase Annual Spend
